

One Application Lasts Up To 4 Hours

- ✓ Kills 99.9% of germs for up to 4 hours
- ✓ Outlasts alcohol-based sanitizers by persisting on skin
- ✓ Alcohol-free formula won't dry hands, sting, or cause cracking
- ✓ Leaves skin feeling nourished and moisturized
- ✓ Phthalate-free paraben-free, sulfate-free

4-Hour Power Alcohol-free Hand Sanitizer tackles germs on two fronts. With the ability to kill 99.9% of illness-causing germs on contact and persist on skin for up to 4 hours at a time (Material persistence subject to surface abrasion and skin cell regeneration), it's an all-around go-to for skin protection.

4-Hour Power Hand Sanitizer doesn't dry hands, sting or cause cracking. The moisture-infused foam or spray leaves skin feeling nourished and silky, even after repeated applications, making it a favorite in classrooms and clinics.

Standard alcohol-based hand sanitizers not only dry skin to the point of pain with repeat use, but they also leave skin vulnerable to recontamination after the product dries. 4-Hour Power alcohol free hand sanitizer forms a moisture-infused invisible barrier that clings to skin to offer proactive protection against germs yet to be encountered, making the skin an unsuitable surface for those newly contracted germs to survive.

Benzalkonium chloride, the active ingredient, is a preferred skin antiseptic that kills germs on contact and inhibits future microbial growth. Our specially refined mineral complex assists in the formation of the protective barrier and is widely used to promote skin health.

Available in a variety of sizes from 2 oz. to bulk containers.
